

Make a simple shape mini-book

Architecture art only. Real masjid buildings can have many designs; these are imaginary examples.

1. Gather safe materials

Use the next two pages, one blank A4 sheet and a pencil. An adult handles scissors. No staples are required.

2. Cut out the four art panels

An adult cuts around each rounded outer panel border on the next two sheets. Keep the pictures and instructions inside each panel.

3. Fold a blank paper cover

Fold the blank A4 sheet in half so its short ends meet. This makes a wide paper cover for the loose art pages.

4. Make a loose-page mini-book

Stack the four cut-out panels inside the folded cover. Turn the loose pages one by one. Decorate the cover if you like.

5. Explore and draw

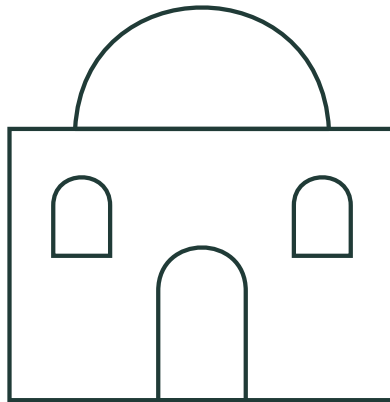

Notice rectangles, curves and openings. Add an imagined shape. Do not draw sacred text.

Mini-book sheet 1

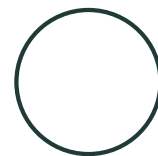

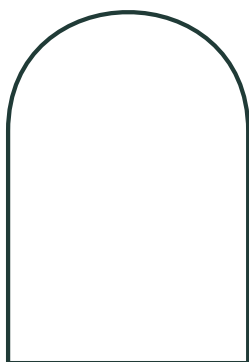

An adult cuts around each panel border. These are art panels, not instructions about masjid use.

A SHAPE STORY

My imaginary building: add a small pattern, but no sacred text.

Doors and windows

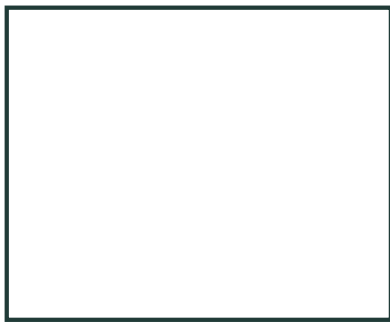

Which openings would you imagine? Buildings do not all look the same.

Mini-book sheet 2

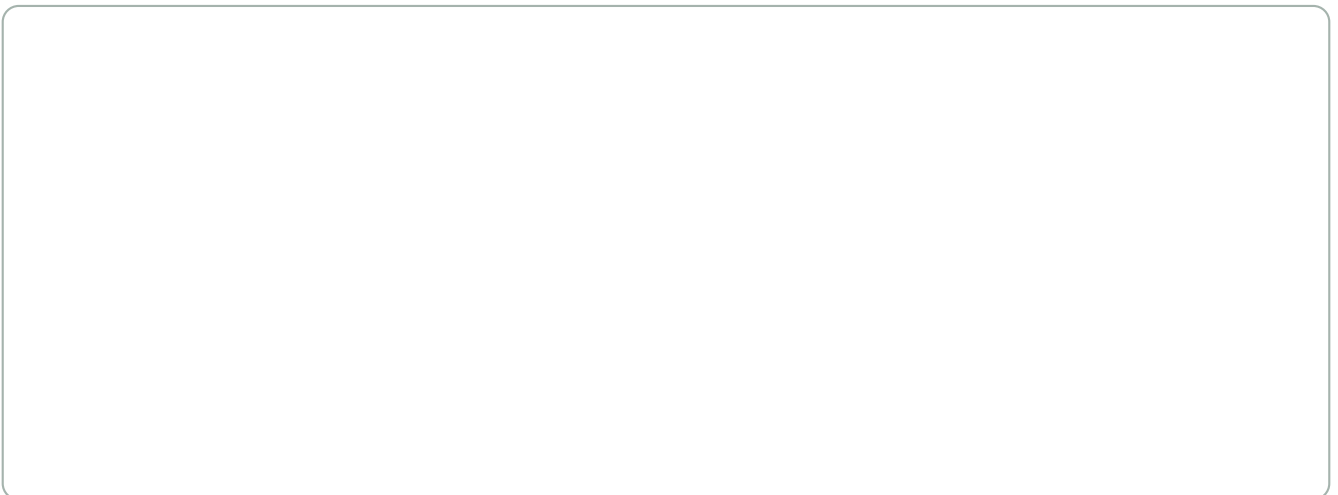

An adult cuts around each panel border. These are art panels, not instructions about masjid use.

Curves and rectangles

Add one rectangle and one curve of your own.

My own imagined shape

Draw an original building detail. This is not a plan for a real building.

My architecture sketch

Use the optional sketch area to combine a few shapes. There is no required building design.

The word masjid names the theme of this art. This pack does not teach religious rules, traditions, duties or claims about sacred places.

Imagine shapes: curves, rectangles, circles, doors or windows.

A detail I chose
